-----	SEDCW	Steel Body Container – Roll-Form Exterior Post
-----	SEVW	Steel Exterior Post Van – 102" Wide
-----	ZTPVW	Toughplate Z-Plate Van – 102" Wide

The Model Code is stamped on the Vehicle Identification Number (VIN) plate located on the roadside nose of all Stoughton Trailers, Inc. products.

Competitive Makes Extruded Rail Quality Statement

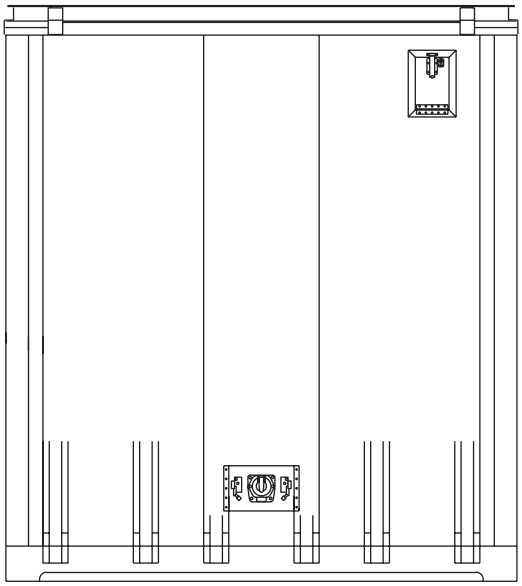

Stoughton Parts Sales, LLC strives to provide the Semi-Trailer Parts aftermarket with the finest quality extruded aluminum rails possible. Rails for our aftermarket program are engineered and manufactured to the same rigid specifications and processes as our "original equipment" rails. Because of this rigid process, we can certify that:

- All extruded parts are made from "prime" 6061-T6 alloy.
- Rails are **Made in the U.S.A.** by an acknowledged long-term supplier to trailer industry 'Original Equipment' Manufacturers.
- All parts can be traced back to the original billet for chemical certification.
- Chemical certification can be supplied upon request.
- All of the processes for extrusion are documented "recipes" with proven mechanical performance exceeding 6061-T6 specification.

We can say with confidence that we believe we are providing some of the finest extrusion products in the industry today.

SPLICES – LOWER RAILS

Stoughton

Lower Rail Splice Procedure

- **Do not weld** on the lower rail.
- On radius front trailers, the splice is to be made 8" forward of the centerline of a sidewall post.
- On bevel front trailers, the splice is to be made 10 3/8" forward of the centerline of a sidewall post.
- On containers, the splice is to be made 12" forward of the centerline of a sidewall post.

HOW TO ORDER A LOCKROD

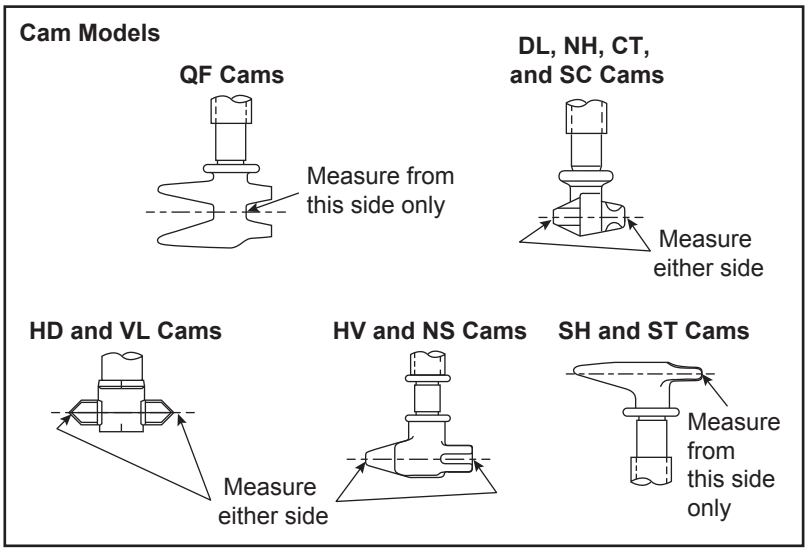

Ordering Example

Model	HV-SH
Hand	RH
Cam Center Length	110.56"
Lever Height	14.00"
Finish	Hot Dip Galvanized
Quantity	4

Trailer and Truck doors vary widely. To make sure that you receive the proper lockrods for your needs, we require the following ordering information:

- **Model** – Specifies the model of the bottom and top cam, with the **bottom cam listed first**. For example, HV-SH would specify an HV bottom cam and an SH top cam (see Cam Models below).

- **Hand** – Specifies whether the lockrod lever is to the left or right of the lockrod when in the closed postion. Left Hand (LH) means the lever is to the left of the lockrod (roadside) for rear doors. Right Hand (RH) means the lever is to the right of the lockrod (curbside) for rear doors.
- **Cam Center Length** – Specifies the length from the center of the bottom cam to the center of the top cam. Please measure accurately.
- **Lever Height** – Specifies the position from the center of the bottom cam to the center of the lever. Standard lever height is 14.00".
- **Finish** – Indicates the coating or material of the lockrod. Options include:
  - Hot-Dip Galvanized Steel (HDG)
  - Plain Steel
  - Electorpolished Stainless Steel
  - 3/4" Plain Aluminum
  - 3/4" Electropolished Aluminum

  If you do not specify a finish, you will receive HDG.
- **Quantity** – Please specify the number of lockrods that you want to order (per Hand).

Lockrod Selection Chart

	Lockrod Type		
	Dual-Lobe / Zero-Torque	**Maximum Reach / Maximum Gather**	**Saddle Cam**
Shifting/AAR requirement	Excellent	Good	Good
Narrow header	Satisfactory	Excellent	Excellent
Resistance to dock damage	Excellent	Good	Satisfactory
Anti-racking	Excellent	Good	Good
Closing a racked trailer door	Good	Excellent	Good
Opening frozen (stuck) doors	Excellent	Good	Satisfactory
Stiff seals on doors	Good	Excellent	Good
Increased security	Excellent	Not Available	Not Available
Economy (lowest cost)	Good	Good	Excellent
Special finish stainless	Available	Available	Available
(ISO Requirements) Live cargo trailers	Excellent	Satisfactory	Good

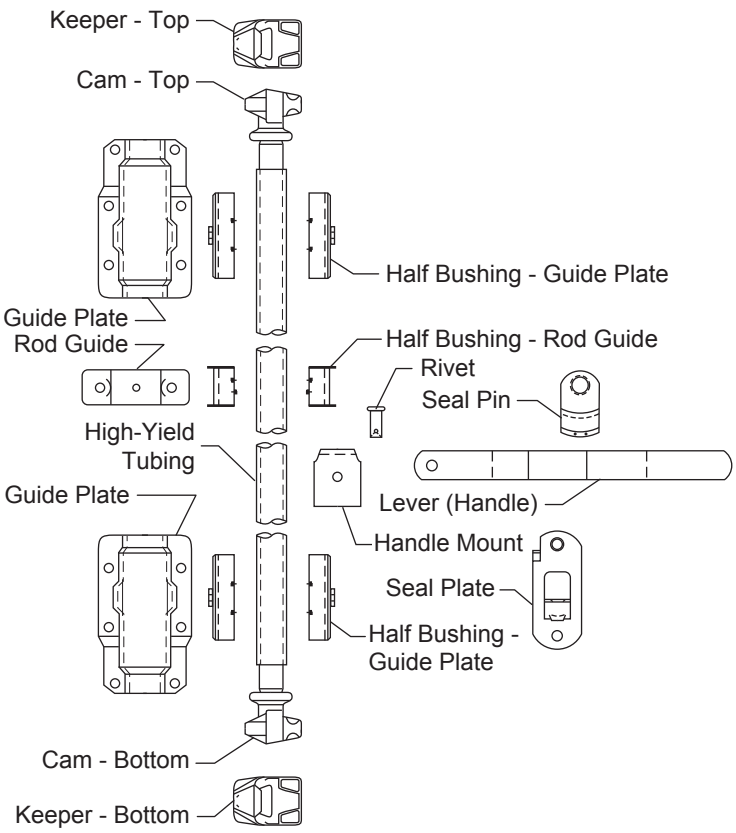

Lockrod Components

Additional Considerations

Lockrods can be ordered with or without mounting components.

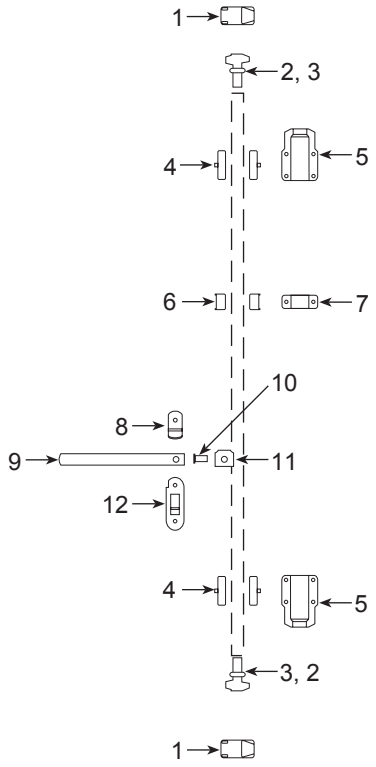

- One rod guide is usually used per lockrod. If additional rod guides are required, they must be specified at the time the order is placed. Order two half bushings for each additional rod guide ordered. Keepers are ordered separately.
- Keepers are available in several mounting options, finishes, materials, and offsets. Contact Stoughton Trailers Customer Service or see the respective chart for each model.
- Standard mounting components usually used with each 1" lockrod (same finish as the lockrod ordered) are as follows:
  2 - Guide plates
  4 - Guide plate half bushings
  1 - Rod guide
  2 - Rod guide half bushings
  1 - Seal plate
  1 - Seal pin

Note: 3/4" Lockrods require different mounting hardware.

SPRING SUSPENSIONS

Binkley Suspension

Note: For single axle Stoughton applications, call with trailer VIN (Serial Number).

Note: This is not the only Binkley suspension available. Please call with VIN (Serial Number) to correctly identify which suspension you have, or look for ID tag on box on sliding suspension, or roadside front hanger on fixed suspension.

Note: Part numbers for ALII may become obsolete without notice.

Air Brake Hose End Kits and Assemblies

- Meets the requirements of DOT 106 and SAE J4102.
- Swivel Ends reduce residual torque in hose for longer life – no need to disconnect both ends to service the brake system.
- Components in contact with the air are made of corrosion resistant brass and nylon to improve air system life.

AIR BRAKE HOSE END KIT

Stoughton Number	Description
TA31402	Two End Fittings 3⁄8" NPTF
TA31403	Two End Fittings 1⁄2" NPTF

CONTAINER RAIL SPLICE PLATES

Stoughton

Upper and Lower Rail Splicing Statement for Stoughton Trailers, Inc.

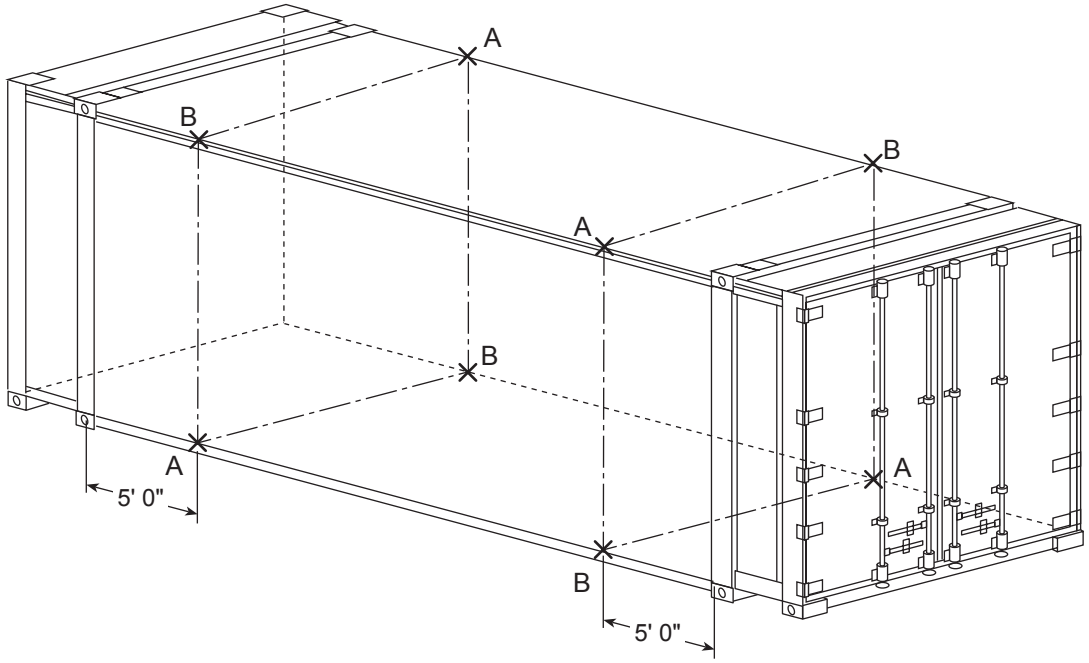

When repairs are to be made to the upper and/or lower rail of a container it is imperative that it be done properly.

The repair procedure and materials to be used should be according to the vehicle manufacture's recommended repair procedure for that particular trailer.

For the best results it is recommended by the A.A.R.(Association of American Railroads) no more than one splice section of rail is permitted in any upper or lower rail between the intermediate stacking frames. In addition, no more than one splice is permitted 5 feet from forward stacking frame of container.

The splice material, number and type of fasteners should provide strength requirements equal to or better than the original section of rail.

With these things in mind, properly repairing the upper and/or lower rail should provide the container with the structural integrity required of it for its useful life.

Permissible Splice Locations

If splice(s) exist(s) at any "A" location, then splice is permitted at any other "A" location(s). If splice(s) exist(s) at any "B" location, then splice is permitted at any other "B" location(s). Neither "A" location may be spliced if either "B" location on the same side is spliced. Neither "B" location may be spliced if either "A" location on the same side is spliced.

Note: No more than one splice section of rail is permitted in any upper or lower rail.

Important Notice

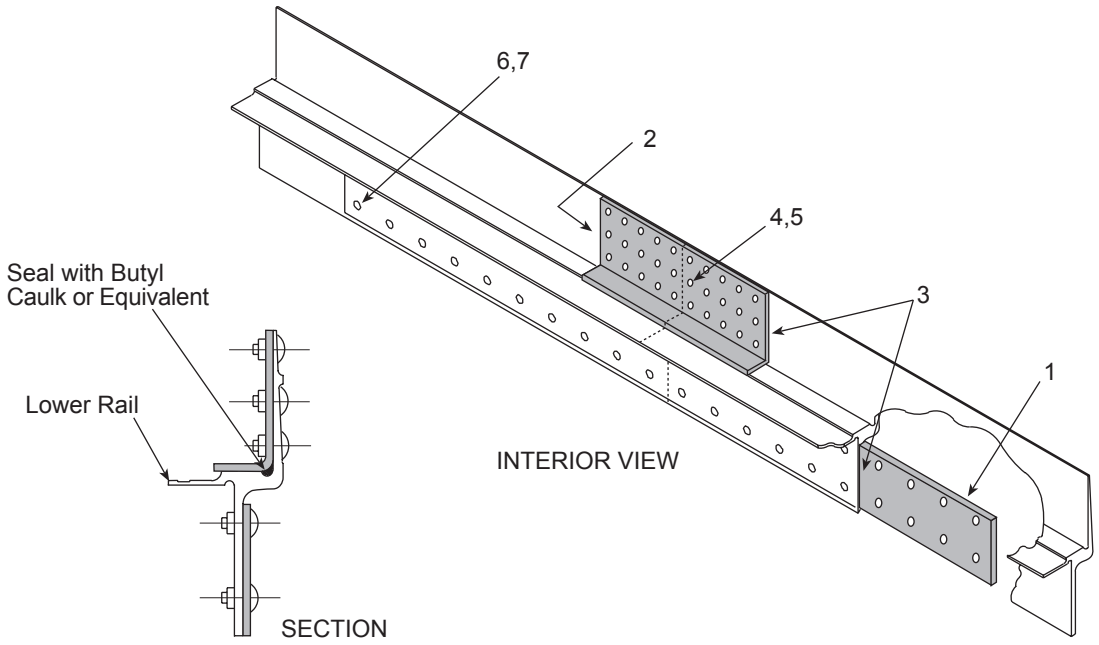

Absolutely no welding is to be used when structural repairs are done to extruded aluminum upper and lower rails. Upper and lower rails on all containers are made from a heat treated aluminum alloy, 6061-T6, with specific strength features required for containers.

CONTAINER RAIL SPLICE PLATES

Lower Rails – Stoughton

Lower Rail Splice Procedure

- **Do not weld** on the lower rail.
- On containers, the splice is to be made 12" forward of the centerline of a sidewall post.
- Holes for fasteners are to be transfer drilled.

NOTES

Return Goods Policy

All returns must be preapproved and issued a Return Goods Autorization Number (RGA#).

Shortages and Adjustments

Any claim for shortage or adjustment must be made within 30 days from the date of the invoice.
